

- 6. The foc'sle & main deck railings, etched parts 3 and 6, fit along the edges of the main deck from the hull step forward to the bow. The netted portions should correspond & fit to the edges of the curved gun deck extensions.
- 7. Etched parts 20 are the netted sections of railing that fit to the edges of the mid gun deck extensions, kit parts D25.
- 8. Stock lengths of vertical ladder, etched parts 81, are supplied in two widths for fitting to vertical bulkheads & masts as desired. These are simply cut to the length required & then fitted in place.
- 9. Anchor chain, etched part 80, is supplied in sufficient length to fit to all three anchor positions if needed. There is also enough to stream from the hawseholes to the surface of the water if the ship is modelled at anchor in a diorama setting.
- 10. Inclined ladders of varying lengths & widths over the standard sized ladders, etched parts 72 and 76, have been supplied to fit to the areas needed after further research. The ladders, etched parts 70, & the landings, etched parts 69, to which they are attached are fitted to the gaps in the railings at the hull step in place of kit parts D18.
- 11. Crane rigging for the boat cranes come in two lengths. Etched parts 49 are short lengths for displaying the crane jibs raised. Etched parts 52 are longer lengths for when the crane jibs are displayed in the stowed position. Crane hooks, etched parts 42, are supplied for fitting the outer ends of the jibs as desired.
- 12. Searchlight lens stars, etched parts 31 and 37, are supplied in small and large sizes. These can be fitted to the fronts of the searchlights, kit parts D37 and B32 after first drilling out the searchlight body to make it hollow. The inside can then be painted silver & the lens star glazed with Cristal Clear for added realism.
